### **DETAILED ACTION**

# Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 12 rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The term "call set-up" in claim 12 is a relative term which renders the claim indefinite. The term "call set-up" is not defined by the claim, the specification does not provide a standard for ascertaining the requisite degree, and one of ordinary skill in the art would not be reasonably apprised of the scope of the invention. Appropriate correction is required.

### Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-12 rejected under 35 U.S.C. 102(e) as being anticipated by Picard et al., Patent No. 6,233,318.

Art Unit: 2645

Regarding claim 1, Picard teaches a method of notifying a subscriber of a plurality of message services of a message:

indicating, with each of a plurality of message services, to a common notification server a presence of a new message for a subscriber on the respective message service(col.3 lines 33-51);

selecting, by the subscriber, at least one terminal from a plurality of terminals (col.3 lines 51-56, col.4 lines 4-14, and col.11 lines 16-27); and

transmitting, with the notification server, to the least one terminal selected a notification indicating that a new message is present and in which message service the new message is present (col.2 lines 26-54 and col.11 lines 37-50).

Regarding claim 2, Picard teaches the method according to claim 1, which comprises, if a message service indicates the presence of a new message, storing with the notification server the data originating from the message service, until the respective notification has been transmitted successfully(col.11 lines 28-36 and lines 51-59).

Regarding claim 3, Picard teaches the method according to claim 1, wherein the transmitting step comprises transmitting with the notification server the notification to all terminals of the subscriber(col.11 lines 17-27 and 37-42).

Regarding claim 4, Picard teaches the method according to claim 1, wherein the transmitting step comprises transmitting with the notification server the notification to at least one terminal selected by the subscriber from a plurality of terminals (col.4 lines 4-14 and col.11 lines 37-42).

Regarding claim 5, Picard teaches the method according to claim 4, wherein the

Art Unit: 2645

subscriber selects the terminal by transmitting a control information item from the respective terminal to the notification server (col.4 lines 4-14 and col.11 lines 17-27)

Regarding claim 6, Picard teaches the method according to claim 1, which comprises transmitting with each message service a message header information item to the notification server when a new message is present, and transmitting the message header information with the notification server at least partially to the at least one terminal selected, at least partially, to output the message header information (col.6 lines 35-62, col.7 lines 29-40 and col.19 lines 1-25).

Regarding claim 7, Picard teaches the method according to claim 1, which comprises, in response to a request by the notification server, transmitting with each message service a message header information item to the notification server, and transmitting at least partially the message header information item with the notification server to the at least one terminal selected to output the message header information(col.6 lines 35-62, col.7 lines 29-40 and col.19 lines 1-25).

Regarding claim 8, Picard teaches the method according to claim 1, which comprises, in response to a subscriber request from any terminal, firstly performing an authorization check with the notification server and then transmitting the notifications present to the terminal [col.4 lines 4-30, col.6 lines 35-62; subscriber is understood to have to log in(authorization check) to the notification server to access his/her messages].

Art Unit: 2645

Regarding claim 9, Picard teaches the method according to claim 1, which comprises processing with the notification server the data originating from the message services for generating the notifications transmitted to the subscriber(col.3 lines 38-62).

Regarding claim 10, Picard teaches the method according to claim 9, wherein the processing step comprises selecting one or more processes from the group consisting filtering, ordering, and formatting the data (col.3 lines 38-62 and col.11 lines 51-59; the data is formatted for the subscriber).

Regarding claim 11, Picard teaches the method according to claim 1, wherein the transmitting step comprises transmitting the notifications by means of a signaling operation to the at least one terminal of the subscriber (col.11 lines 37-59; the notification alerts are signaling operations).

Regarding claim 12, Picard teaches the method according to claim 1, wherein the transmitting step comprises transmitting the notifications by means of a call set-up to the at least one terminal of the subscriber (col.4 lines 9-14 and col.11 lines 37-42; notification can be sent to telephones or cellular phones which is used for call set-up).

## Response to Arguments

3. Applicant's arguments with respect to claims 1-12 have been considered but are most in view of the new ground(s) of rejection.

#### Conclusion

4. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP

Page 5

Art Unit: 2645

§ 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37

CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE

Page 6

MONTHS from the mailing date of this action. In the event a first reply is filed within

TWO MONTHS of the mailing date of this final action and the advisory action is not

mailed until after the end of the THREE-MONTH shortened statutory period, then the

shortened statutory period will expire on the date the advisory action is mailed, and any

extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

the advisory action. In no event, however, will the statutory period for reply expire later

than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Joseph T Phan whose telephone number is 703-305-

3206. The examiner can normally be reached on M-TH 8:30-6:30, in every other

Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Fan Tsang can be reached on 703-305-4895. The fax phone numbers for

the organization where this application or proceeding is assigned are 703-872-9314 for

regular communications and 703-872-9314 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or

proceeding should be directed to the receptionist whose telephone number is 703-305-

9600.
